2.1 Create a use case diagram for e-shop software system, your system must use an existing web service to check the electronic cards when paying for goods and in the start of every year it backs up the transactions.

2.2 in the following use case model, complete the model by having use cases to allow the following:

notify student about late return, remove old books from the system, do some analysis about number of book loans in each month, search for the book of the month with the maximum loans, reserve a book when it is not available now
